

Chillin' in Clemson: Upon viewing this short film, students will gain a better understanding of the process to create and distribute chilled water across Clemson's campus.

1. Which three energy conservation techniques are highlighted in this video?
2. How might it be beneficial to keep your windows open, rather than using the air conditioning system in your room?
3. In what ways can you use the information gained in this video to educate your peers on the water cooling procedures used at Clemson?
