

Conservation Man: The goal of this video is to promote energy and water conservation, while learning creative ways to influence the sustainable lifestyle practices of others.

1. What are some small steps you can take to conserve (water, energy, resources, etc.) in your daily life?
2. What are some creative ways that you can influence those around you—whether peers, coworkers, or classmates to conserve?
3. After viewing the video, take the test to measure your ecological footprint: <http://www.footprintnetwork.org/en/index.php/GFN/page/calculators/> and discuss the results. What surprised you? How many earths are needed to support your current lifestyle choices? How can you apply what you've learned from the video to this information to create change?
