

**Eco-Plex Garden Project:** This short video focuses on the collaboration between Clemson students and the SC Botanical Gardens, in order to create a small community garden on campus, which in turn had an impact on the Clemson community.

1. In what ways is gardening beneficial for our lives? (environmental, fiscal, social, etc.)
2. How can a small residential garden have a positive impact on the larger Clemson community?
3. What gardening programs and efforts are you aware of on Clemson's campus? Are they adequately reaching students?
4. Would you be interested in starting a garden project within your community? What would this look like? Who would tend it?
