Using your Roku remote select your language of choice.
Select the wireless interface to connect to try and connect to the resmedianet network.
Scroll to the “scan again to see all networks” tab. Note the mac address and register it at netreg.clemson.edu
Select the “resmedianet” network and enter the network key/password “tigerpaw”.
Once the network key is entered the device will see if it can connect to the network and has internet access. If your device has not been added on the net registration page then it will not connect to the network.
Once connect your Roku device will download the latest available firmware form Roku and restart.
Once the device restarts, a screen will show with an activation code. Go to Roku.com/link to register a new or login with your existing account to add this player to your list of registered devices.

For more information see the Roku site at https://support.roku.com/hc/en-us/sections/201718858-Roku-Streaming-Players.
